

## Java Programming Lab 10

Code will be properly indented and commented, and it will not crash.

You will be using JavaFX for this lab. Read the *JavaFX 8 Introduction by Example* book!

Peruse the file Lab10 Screenshots.pdf. Examine the screen shots. There are four different colors and three different scales. Scale shouldn't change color and color shouldn't change scale.

Write a java FX8 program that does this exactly the same.
